

Cordova Plugin Release Notes

Plugin Version 1.1.5

Release Date: August 9, 2017

Data Collection Model Version: 2.7

Supported Platforms: Android, iOS, Windows Phone 8.1, Windows 8.1, Windows 10

Feature changes:

1. Updated core library. Uses Application Tag for JavaScript library version 2.1705.04 and Streaming Tag for JavaScript library version 6.1.0.170130. Relevant changes are:
 1. [TAGLJSCR-32] Treat 301 and 302 HTTP response codes as successful transmission when `cacheHttpRedirects` is turned off in the library configuration.

Bug fixes:

1. [TAG-3128] Ensure correct plugin behaviour in projects where RequireJS overrides the Cordova `require` method which the plugin uses to load the core library.

Known issues and limitations:

- There were no known issues for this release.

Plugin Version 1.1.4

Release Date: April 21, 2017

Data Collection Model Version: 2.7

Supported Platforms: Android, iOS, Windows Phone 8.1, Windows 8.1, Windows 10

Feature changes:

1. Updated core library. Uses Application Tag for JavaScript library version 2.1701.30 and Streaming Tag for JavaScript library version 6.1.0.170130. Relevant changes are:
 1. [TAG-2935] Improve collection of automatically calculated Streaming Tag positions and unique playing time for players which support changing the playback rate. The library will now account for playback speed using the values provided for playback rate change notification method calls (if these calls appear in the implementation).
*Please note that playback rates can be **negative** to indicate reverse playback. The library uses the playback rate to calculate the current position in between playback state change notifications. Depending on the player's exact reverse playback capabilities, the playback scenario and execution timings, reverse playback past position 0 could cause the calculated position be a negative value.*
 2. [TAG-2953] Prevent calls to player property change notification methods of which the changed value is the same as the current value from triggering a Streaming Tag measurement request.

3. [TAG-2950] Prevent a *TypeError* when calls to player property change notification methods are executed during seeking and the library detects a system clock jump to the far past.
4. [TAG-2951] Prevent incorrect Streaming Tag buffering times from being collected when calls to player property change notification methods are executed during *Pause-on-buffering* and the library detects a system clock jump to the far past.

Bug fixes:

1. [TAG-2990] Ensure secure (HTTPS) transmission is used when running on iOS version 9 and newer.

Known issues and limitations:

- There were no known issues for this release.

Plugin Version 1.1.3

Release Date: December 7, 2016

Data Collection Model Version: 2.7

Supported Platforms: Android, iOS, Windows Phone 8.1, Windows 8.1, Windows 10

Feature changes:

- First public release.
- Uses core libraries Application Tag for JavaScript library version 2.1612.06 and Streaming Tag for JavaScript library version 6.0.0.161201.

Bug fixes:

- There were no known bugs prior to this release.

Known issues and limitations:

- There were no known issues for this release.
